Design with Fire

Fire ignites something deep in our souls that is ancient and powerful. There's something undeniably magical about sitting around a fire pit, telling stories and roasting marshmallows. While traditional wood-burning fire pits can be a great addition to any outdoor space, they do require a bit of work to maintain and can produce a lot of smoke. That's where a gas fire pit comes in – it's easy to use, requires little maintenance, and there is no smoke blowing in your face. If you're thinking about adding a gas fire pit to your outdoor space, here are the top 5 factors to consider.

- Location
- Fuel
- Furniture
- Size
- Style

Whether you are starting from scratch on an entire back yard project or just looking to add some ambiance and a community gathering space to your yard, this guide will set you on the right path to achieving your fire pit dreams.

LOCATION

The first step in planning your gas fire pit is to choose the location. You'll want to find a spot that's flat and level, and at least 3 feet away from any structure or combustible material. Make sure the location is convenient for seating and entertaining. Consider the flow of traffic around your fire pit and throughout your outdoor area.

A fire pit can work in a variety of locations around your property. Place it in your backyard, on a deck, patio, pool area or courtyard. Even a wood or synthetic deck is perfectly safe for a gas fire feature. There's no need to protect the material the fire feature is setting on; nearly all the heat rises above the burner plate. You can even place it under a pergola as long as you have at least 120" of clearance above the fire pit.

Consider mapping out your entire seating area to see if it meets your needs before committing to anything. Bring a chair or two to sit in and see if you like the views from your planned fire pit location!

FUEL

Not all burners are created equal! If you love the mesmerizing, roaring fire and the heat of the Warming Trends CROSSFIRE Burner, make sure that you will have adequate gas supply to achieve this. Most fire pits on the market put out between 10,000 and 60,000 BTUs. Our burners start at 60,000 BTUs and go up to 470,000+ BTUs, with 180,000 being common.

You can buy a high BTU burner, but if you don't have adequate fuel supply, your fire will be small and sad. A great rule of thumb is: fuel equals flame. That basically means that if your fire is small and weak, it is because your fuel supply is inadequate. Even if your burner's BTU rating is higher than your line can handle, you should be ok as long as it supplies 70%. In order to know what your capabilities will be, call up your local gas professional and get their advice.

Ask yourself what type of fuel is best for you, whether natural gas or propane, and how to incorporate it into your plan. One is not necessarily better than the other. It all comes down to your unique situation. Like we always say, every fire pit is different! If, down the road, you need to convert from LP to NG or vice-versa, you can do so by purchasing replacement jets from us at \$25 each.

FURNITURE

Once you've chosen the location and fuel for your gas fire pit, you'll want to add seating. This can be anything from chairs and benches to built-in seating or even a sectional. Make sure there's enough space for people to move around comfortably and that everyone has a clear view of the fire pit. We recommend about 18" – 24" between your fire feature and your furniture.

Consider what you will use the fire pit area for most. Do you want space to have a nosh or two around your fire pit? Mostly just deep conversations with your significant other? A circle of friends chatting and playing some tunes?

SIZE

After you've chosen the location, fuel type, and furniture, you'll need to decide on the size of your gas fire pit. This will depend on how many people you plan to accommodate and the size of your outdoor space. How many people will regularly be enjoying the fire pit? If it's a smaller number, say two, then you obviously do not need as large of a fire feature to accommodate them. If your yard is the community hub for parties, you will probably want a larger fire pit.

Common round & square standard opening sizes are 18", 24", 30", 36", 42", 48" and 60". Most of our fire pits are 16" inches tall and feature ledges for feet, drinks, etc. from 7" to 12". As a general rule, you need about 18" – 24" of space between the edge of the fire feature itself and your furniture. You will probably want to be able to walk behind and around the furniture, so add some space for that as well.

STYLE

Once you know your dimensions and furniture layout, all that's left to choose is the style! Are you a DIYer looking for a Ready To Finish Kit that you can add your own flair to? Or would a finished complete system be more up your alley? You could even build your own from scratch with one of our Warming Trends CROSSFIRE Burner systems.

VENTURE

SERIES

The Venture Series **STEEL** fire tables were born out of the desire to break the mold; to unleash the creativity and passion in designing beautiful spaces. These fire features are fully customizable and suitable for residential and commercial builds of all sizes. Set your expectations high, push up your sleeves, and get creative. No limits.

55" x 32" 150-230K BTU
60" x 32" 170-290K BTU
67" x 32" 210-290K BTU
76" x 32" 250-350K BTU
86" x 32" 410K BTU
96" x 36" 470K BTU

The Olympic is designed and built to be the sleekest, most functional, most durable fire feature in the industry. It features a high output, high efficiency brass burner and incredible standard or custom finish options. Built with lifetime 3/16" America made steel, right here in Missoula, Montana. It's easy to see why the Olympic has become our new Editor's pick BEST fire feature. Elevate your space to the next level.

YELLOWSTONE

36" 84-140K BTU
42" 120-180K BTU
48" 180-280K BTU
54" 240-320K BTU
60" 300-360K BTU

In 1872, the world's first National Park was born. Ancient geysers and beautiful forms; big skies and distant mountains... the planet is inspired by the mystery of Yellowstone.

In the same vein comes a strong, consistent, and beautiful fire table for your backyard or commercial space. Born and raised in Montana, The Yellowstone will be the rugged and faithful centerpiece to your gathering for years to come. It features a high output, high efficiency brass burner and incredible standard or custom finish options. Built with lifetime 3/16" America made steel, right here in Missoula, Montana. Elevate your space to the next level.

ZION

32" 120-180K BTU
38" 180-280K BTU
47" 240-320K BTU

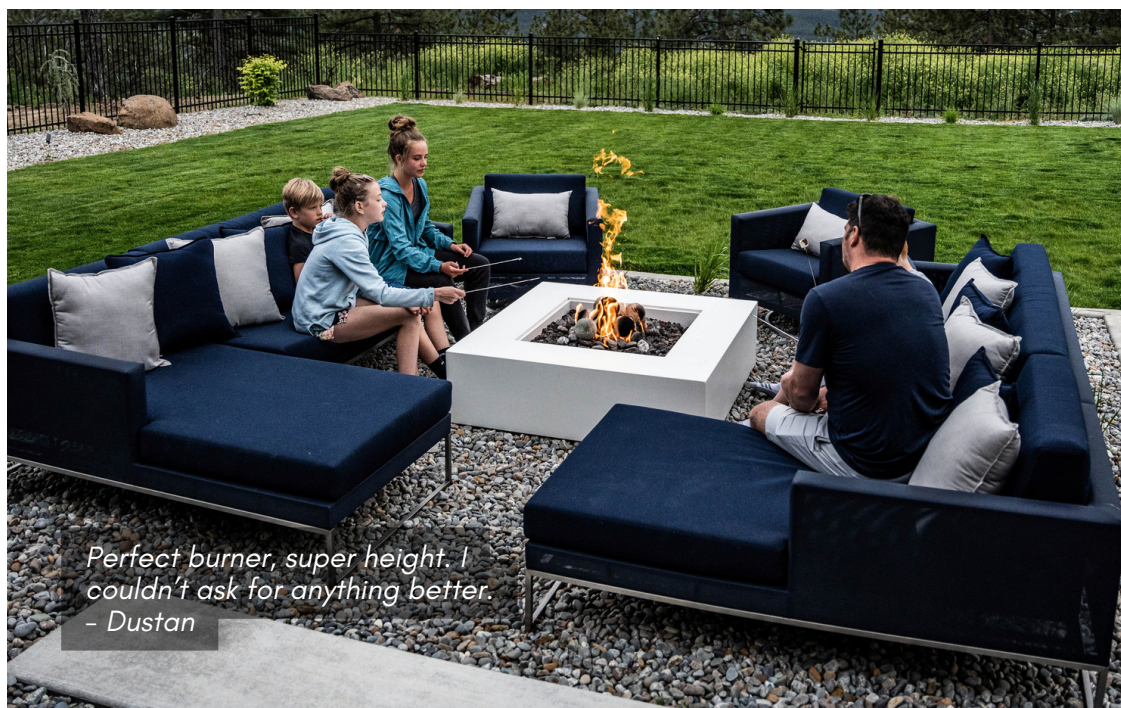

Zion National Park has an extraordinary beauty unlike any other place on Earth. Along the same vein, this fire table brings a design that emulates the beautiful shapes and formations of the beloved national park. Featuring a high output, high efficiency burner, and custom finishes that will elevate your space to the next level.

If you're looking for the best fire pit burner available, then do yourself a favor and buy a Crossfire Burner from Montana Firepits. You won't be disappointed. Just be prepared to buy more patio chairs to accommodate all your new guests!
- Skye in Phoenix

High quality components that produce an awesome fire! I am sure we will enjoy this addition to our patio for a lifetime... Highly recommend Montana Fire Pits!
- Steve

Perfect burner, super height. I couldn't ask for anything better.
- Dustan

Love the products and the customer service was exceptional. You feel like you are getting a great product and a new friend.
- Nelson

The products are top notch and the customer service is second to none.
- Oscar

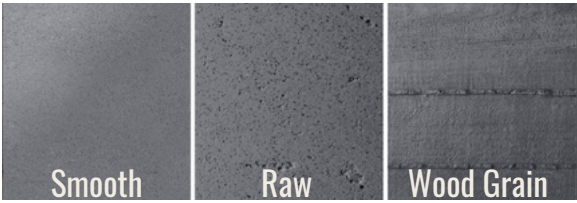

The burner is amazing and throws off some serious heat!
- Charles

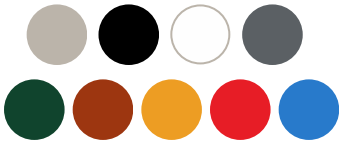

Our popular Gather Series fire tables are all made of Glass Fiber Reinforced Concrete. For the past few years, GFRC fire features have made their way to the top of our best sellers list. The rise of complete systems has made outdoor living projects simply far more satisfying. In the early days, concrete (GFRC) was the material of choice for the fire 'vessel'. GFRC stands for Glass Fiber Reinforced Concrete.

It's like concrete, but with fibers mixed in to keep it from cracking. We've all witnessed a cracked concrete patio at some point, but GFRC is stronger and more durable. If treated with care, a GFRC fire table could last a lifetime.

BURNER STYLES

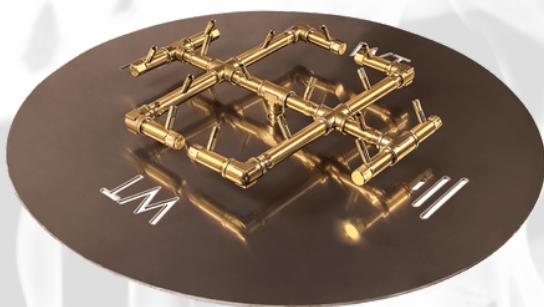

The Crossfire® by Warming Trends

TWICE THE FLAME | ALL BRASS | LIFETIME WARRANTY

Nothing compares to the Crossfire burner. With the same amount of fuel, you get twice the flame. If you have the full fuel volume, you can expect a 2-3 foot tall fire. Instead of stainless steel tubing with holes punched in it with fuel that just seeps out, the engineered "jets" mix fuel and oxygen to create the hottest, most natural looking flames in the industry. EVERY Crossfire is HOT. Simply choose the size that works best in your build. All of our complete systems comes spec'd with the correct Crossfire burner for the space. Kit options include an aluminum plate, a key valve/flex line kit for flame height adjustment, and either Match Lit, Battery Spark Ignitor, or the Premium Electronic Ignition.

ABOUT US

Montana Fire Pits is run by a husband and wife team living & adventuring out of beautiful Missoula, Montana. Jonathan and Amy founded the company after moving to Montana, in 2014, from Colorado. Married in 2004, they have three daughters: Lauren, Asher, and Brooklyn.

Jonathan has built his career in architecture, construction, design and innovation. His experience, over the last 25 years has given him the perfect knowledge base for designing and curating the best outdoor products. For Jonathan, helping you create the perfect fire feature to gather around with your family and friends is not just the culmination of all his professional experience, but a personal passion to both live and inspire a lifestyle of fun and adventure!

Amy received her masters in Curriculum Design from the University of Denver, as an educator for thirteen years. She has prior experience in video production and general customer service amazingness. She's your best friend when it comes to getting the answers you need and your shipment on time! Amy loves to live a life full of faith and adventure, which radiates through her leadership as the co-founder and manager of Montana Fire Pits.

Jonathan & Amy have made it a top priority to surround themselves with a *Fire Family* team who are passionate about creating and living a fired-up life of faith & FUN!

PRO SOLUTIONS

The design/build community is creative, robust and highly skilled. Our founder, Jonathan Howie, has built his career in design, construction and architecture and is still as fascinated by all aspects of it since the day he started. At Montana Fire Pits, we set out to be your go-to resource to deliver your clients the most incredible gas fire features available for both residential and commercial projects.

YOUR TRUSTED CREATIVE PARTNER

Gas fire features are often a focal point to outdoor spaces, and they have really started to come into view on most projects since about 2016. Montana Fire Pits has been a leader in the industry since before then. We give expert, trusted advice when design and construction is needed. Fire is our only focus; we decided to specialize in the early days and it has served our clients (and our business) quite well. We're excited to partner with designers and builders around the country.
